## **DRS Pumper System**

*The Proven Handheld Wellhead Data Collection Solution*

*The flexible solution to growing into the 21<sup>st</sup> Century, "a time of automation and information management".*

**Data Resource Systems, LLC** offers oil & gas businesses like yours, **an affordable means of managing your well operations with time-relative information.** The **DRS-Pumper** system requires a **very small investment.** This allows you to make your decision as to when you should move into the realm of automation and controls while losing little, if any of your investment. This system accurately processes lease data and makes it available for use within 24 hours of being recorded in the field.

Your business can purchase wells and easily add the wells to the data management system, or sell wells and remove them from the system while losing little, if any investment in the data management system. **Later, if you want to add automation,** controls and data gathering to all or a few of your wells, you can simply remove the wells from the service list, **you won't have to wait until you get a payback on your investment.**

Fast data capture starts with your pumper and a palmtop field computer (or any other DOS or Windows-based operating system computer with a modem and telephone access). Data is entered into the palmtop daily and downloaded nightly for processing. Once processed, data is available to your firm for use with our Windows-based viewing programs.

**DRS PumpView & DRSReport** programs allow you to quickly examine, graph and print daily and/or historical production and lease equipment performance data, as well as concise reports on every well you operate within the service.

### **System Benefits**

- **Fast data management** / Processed data in 24 hours or less!
- Easy to learn & use / **Typical training time 45 minutes!**
- Higher operating efficiencies
- Reduced paperwork load / Print reporting only as required!
- **Reduced load on staffing resources**
- **Identify well and imbalance problems quickly**
- **Reduce errors** caused by multiple inputting / One time data entry
- Manage volumes for pipeline & working interest imbalances
- Manage volumes for state allowables
- DRS Grouping Wizard
- DRS TouchTone data entry / Data capture without field computer equipment expense

- DRS PumpView & DRSReport / Windows 9X & NT report & data viewing and graphing programs
- Potential for increased revenues
- **Accurate nomination data available daily for marketing decisions**
- **Data interface** with most accounting & engineering applications
- Reasonable, monthly / **lease specific billing** for auditable accounting expense allocations
- DRS Managed Data Capture Service / Host processed and managed data capture services for companies of all sizes and well counts
- DRS Managed Data Capture Service "never" requires additional upgrade or system add-on charges. Your systems are always updated!
- **Customer Support when you need it, at no additional costs!**
- **Smaller cash outlay** required for startup of system.
- **User friendly and quick to learn.**
- **Toll-free phone calls** for transferring daily pumper data, except for keypad entry.
- **No extra charge** for the pumper or viewing software. Set up as many viewer sites as is needed to allow flexible use of the system. Viewer site calls are not toll-free into the bulletin board system.
- **Access data when you are away from the office** with laptop and modem. Data Resource Systems will charge back pre-authorized toll-free calls made by the customer into the bulletin board system.

**This system allows relatively fast (24 hour) data acquisition. Complete wellhead automation, control and data acquisition hardware and software are available at Hughes Gas Measurement, Inc.**
